

LUCENS

Lucens fabrics are designed and woven with light. Silk and other precious yarns are interwoven with optical fibers on Rubelli looms and illuminated by Texlum, creating an extraordinary luminous filigree.

This unparalleled decorative fabric emits light and can be assembled into panels, for easy wall and ceiling installations, or incorporated into furniture elements such as screens, headboards and other furniture pieces.

Lucens enhances the quality and comfort of any environment with a warm, soft, and extensive light that is fully dimmable. It is an enchanting blend of past and future, tradition and technology.
